Storage Service

Your Data is the
Most Important
part of your computer

Zettabits: Storage Solved

Reliable data storage is critical for reliable business operation. The consequences of a failure of your data storage infrastructure range from embarrassment and delay, costing you customers, to the complete collapse of future business operations.

Ensuring the availability of your business critical data means protecting it with a reliable offsite backup solution: a backup solution which provides the dependability you need to ensure business continuity; the performance required to keep up with your demanding and dynamic data; and the security required to ensure that your confidential business data remains confidential.

Zettabits delivers the reliable data storage solution you need to ensure your business continuity, without burdening you with inflated prices and complex maintenance.

Zettabits provides the reliable data storage you need.

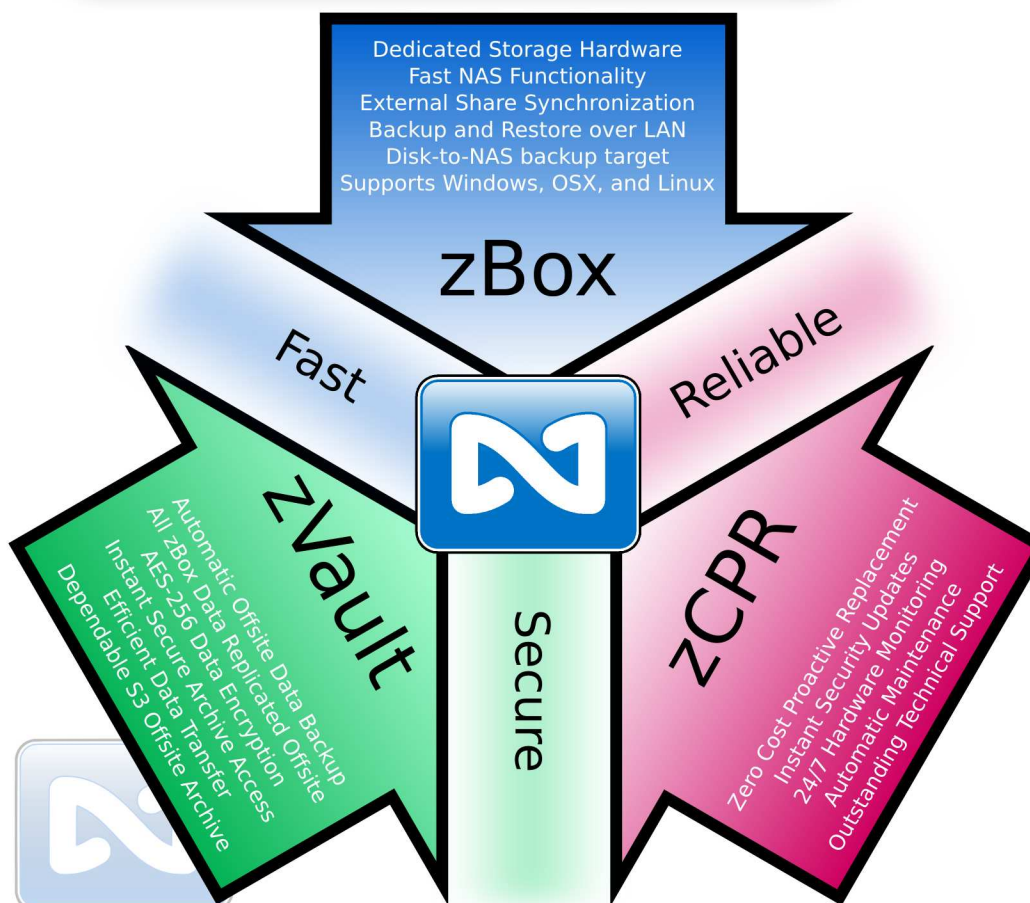

Storage That Just Works

Zettabits is more than just another offsite backup solution. Zettabits combines the zBox dedicated storage hardware, zVault automatic offsite backup solution, and zCPR monitoring and maintenance storage package, to deliver a complete storage package.

With dedicated storage hardware, and a dependable flat monthly rate, Zettabits allows you to provision the storage you need, at a price you can depend on. zVault ensures that any data you store will remain safe, no matter what happens to the zBox hardware. zCPR substantially reduces downtime and eliminates maintenance and troubleshooting headaches when something goes wrong.

All together, Zettabits is more than just the best data backup in its class, it's the start of a whole new way to think about data storage.

Zettabits, data storage that works.

Easy Network Integration

Zettabits is an enhanced network storage solution, and integrates with existing infrastructure in several different ways.

As a NAS device

zBox supports unlimited network shares with public and password protected access. Unlike any other NAS, however, a zBox includes zVault and zCPR, ensuring that your data is always protected and your hardware fully monitored. No surprises, just data storage.

Automatic Network Share Backup

Enhance any existing network share to have automatic local and remote backups. Simply select your network share from the list, or enter it directly and it will be automatically protected. Even better, if your primary server ever fails, your zBox can instantly export any synchronized share, restoring your data access immediately and reducing your downtime.

Drop-In Backup Replacement

Upgrade any existing backup scheme to include automatic offsite backup by adding Zettabits. Simply change the backup target from your current media to a zBox, and your backups will be automatically replicated offsite.

Pitfalls of Software-Only Solutions:

- Server failures force slow offsite restoration
- Backups compete with business critical resources
- Licensing adds cost to unrelated purchases

Benefits of Hardware

- Dedicated processing = faster, better backups
- Simple installation and configuration
- Expanded network storage space
- Instant on-site access when server fails

Data Backup is not Data Copy

- Multiple, overlapping checksum verifications
- Block-differential transfer encoding
- Automatic rollback on failed transfer
- Highly resilient to network failure

zBox Hardware

Component	Professional	Datacenter
Storage Capacity	140 - 690GB	1000 - 6000GB
Processor	1.2GHz	2x DualCore 2.0GHz
RAM	1GB	8GB ECC
Primary Storage	RAID 1	Raid 10
Dedicated Backup Processing Storage		2x 15,000RPM SAS, RAID-1
Other Features	Hardware AES-256 Engine (Full Disk Encryption)	Redundant Power and Networking

Secure Data Handling

- zBox runs security hardened linux kernel
- AES-256 Data Encryption of archived data

Archive Transfer Security

- Complete end-to-end encryption
- 128-bit SSL connections
- Endpoint Certificate Authentication
- Enforced Transfer Timeout Windows
- Transfer Checksum verification

zCPR Security

- 128-bit SSL monitoring connections
- Bi-Directional SSL connection verification
- Automatic Security Updates

Offsite Archive

Amazon S3 Cloud Storage

- Better than 99.95% Uptime
- Multisite Data Replication
- Greater than 500mbit Performance

Zettabits Remote Console

- Instant Data Access using any web-browser
- Secure: Requires password *and* data encryption key
- Download single files or entire directories

Zettabits Prices

Professional:

Size	12 month	24 month	As Low As
140GB	169	152	136
225GB	203	183	163
265GB	229	206	184
365GB	254	229	203
455GB	339	305	271
690GB	424	382	339

Datacenter:

Size	12 month	24 month	As Low As
1000GB	999	899	799
1500GB	1249	1124	1000
2000GB	1499	1349	1199
3000GB	1999	1799	1599
4500GB	2799	2519	2239
6000GB	3599	3239	2879

'No contract' option available for all plans
 'As Low As' includes 48-month contract and annual pre-payment
